13b. Justification Details (Continued)

The revised constituent list meets regulatory requirements. The list of constituents that is sampled and analyzed for SST wells has been modified based on the data obtained in SST RCRA Standard wells since 1991/1992. Gamma-emitting radionuclides have not been detected in these SST monitoring wells, so low-level gamma scans have been removed from the constituent list. ⁹⁰Sr has also been removed from the sampling list for the same reason. Mercury and unfiltered ICP metals have also been removed. Alkalinity and TDS have been added to the list of Site Specific Parameters in Table 3-11.
